

Operational Policy – Reduction Targets for Natural Resources

French Steakhouse & Bistro

Oscar's French Bistro and Steakhouse are committed to a sustainable and efficient operation policy which addresses the environmental issues in the use of natural resources. We aim to set reduction targets and ensure optimum use of the resources we have available.

This policy applies to all operations that Oscar's French Bistro and Steakhouse undertakes. This applies to all suppliers including third parties that provide goods and services to the organisation whether new or existing.

The policy aims is to achieve the following:

- Meet our wider sustainability objectives and targets
- Reduce our reliance on natural resources
- Work with suppliers who share values to reduce reliance on natural resources
- Use alternative methods where possible to reduce our impact on the environment

Electricity Consumption

We aim to reduce our electricity use through monitoring and setting reduction targets throughout the year. Renewal of our electricity contract will ensure we commit to using a green supplier for all our electrical supplies. This ensures we are reducing our environmental impact and only sourcing from renewable forms. Our targets will be reassessed on an annual basis and share details and reductions with staff members.

Gas Consumption

We aim to stop all use of gas within our restaurant through the use of our reduction targets, due to not being a renewable source. We monitor our current usage and ensure we minimise use when possible through alternative cooking methods.

Water

We monitor our water usage on a monthly basis and set reduction targets. We have current protocols in place to ensure we optimise our water usage where possible, such as ensuring dish and glass washers are only turned on when full. We aim to look into alternative fixtures in the future, such as low flow taps and dual flush toilets. We currently set annual reductions targets and are aware of our current monthly usage.

Carbon Reductions

We currently monitor aspects of our carbon output by the products we purchase, ensuring our suppliers are sustainably aware. We aim to only work with suppliers that share the same environmental values as we do. Carbon reductions within our business will be measured in 2023 alongside our other businesses, this will allow us to make firm reduction targets and plans to ensure all staff are working towards the same goals.
